Dan Marshall

Senior full-stack engineer with 11+ years of enterprise .NET and JVM delivery across microservices, event-driven systems, cloud platforms, production AI, and developer tooling.

B.Sc. Mathematics and Computer Science — University of South Africa (UNISA)

Strengths

- Enterprise C#/.NET engineering from .NET Framework 3.5 through .NET 11, with Clean Architecture, DDD, CQRS, WebAPI, GraphQL, MassTransit, EF Core, Dapper, and SQL Server.
- Production AI and AI-assisted delivery: AWS Bedrock, OpenAI, Claude API, LangChain4j, guardrails, local LLMs, MCP, agent/evaluation harnesses, Claude Code/Codex skills, prompt engineering, and automation.
- Delivery discipline: TDD, integration testing, mutation testing, code review, pair/mob programming, mentoring, and pragmatic refactoring.
- Cloud and DevOps: Azure App Services, Functions, Service Bus, Azure SQL, Blob Storage, App Insights, Entra and Power Platform; AWS ECS/SQS/S3/Bedrock, Docker, PowerShell, Azure DevOps, TeamCity, Octopus Deploy, and GitHub Pages.
- Front end: TypeScript, React, Angular, Astro, Vite, Vitest, Tailwind CSS, Material UI, Storybook, responsive UI, and browser automation.

Recent Work

Rapid Circle - Senior Consultant

July 2026 - November 2026

- Rebuilt CFMEU's Wage Claims Manager from proof of concept to production in its workspace; fixed security flaws, cut resource use, achieved 100% domain/application test coverage, and added extensive front-end E2E tests.
- Built the Siemens OMVS WMS proof of concept end to end from operational requirements.
- Hardened TimeMon's Windows client, including session monitoring, privacy hotkeys, and test-backed refactoring; shaped Blackmores' technical backlog.

Selected independent engineering projects

- Built an AI engineering system around reusable Claude Code/Codex skills, MCP, agent/evaluation harnesses, project memory, TDD, mutation testing, and workflow automation.
- Developed a Roslyn-powered C# refactoring CLI for semantic rename, move, reference lookup, dependency analysis, duplicate detection, and safe refactoring across complex .NET solutions.

Reapit - Senior AI Engineer

September 2025 - February 2026

- Built and deployed an AI-driven property inspection system using AWS Bedrock, producing structured assessment reports constrained by business rules.
- Forked LangChain4j to add Bedrock guardrail support, then migrated back to the official implementation within one day when upstream support landed.
- Optimised LLM cost, performance, and model selection while advising teams on practical AI use cases.

RACT - Senior Software Engineer, Back-end

June 2024 - July 2025

- Modernised .NET Framework 4.7.2 components to .NET 9 and built resilient services using MassTransit, WebAPI, GraphQL, and SQL Server.
- Applied Clean Architecture and DDD, and contributed to an AI coding-rules pilot focused on safer LLM-assisted engineering.
